

## Traceability System

Eliminate paper and pencil system, complicated Excel Spreadsheets and other DIY systems, and replace them with a barcoding and scanning system that's easy to use and reliable. VistaTrac's real time inventory software is flexible, so it works great for any fresh food company -offering catch weight labeling, fixed weight labeling, jullian date or custom lot numbers, batch numbers, serial numbers, palletizing and warehouse locations. The biggest benefit that VistaTrac offers is that it can work with your existing accounting system.

If you're using an off-the-shelf package like QuickBooks or SAGE, or even if you have a custom accounting system - VistaTrac will work seamlessly, sharing sales orders and purchase orders, and updating them in real time. If you've been trying to use QuickBooks for inventory or SAGE/MAS90 inventory, and especially if you've been doing production entries in MAS, VistaTrac can automate your data collection and provide the reports you need, saving time, stress, and money. Use your accounting system for accounting - use VistaTrac for plant-floor data collection, barcode labeling, real time inventory, raw materials tracking, and production reporting.

### Integrated Labeling

Barcode labels are a fundamental part of VistaTrac technology and a great investment for your business, but VistaTrac is much more than just printing labels.

Printing and scanning barcodes with VistaTrac collects and transfers information in real time. This eliminates log books and manual record keeping, providing valuable data collection and improving efficiency. VistaTrac prints fixed weight or catch-weight labels on-demand, adding to your inventory every time a label prints (requires Inventory Module).

VistaTrac labeling is designed for labeling on the packing line in your plant.

## Receiving

VistaTrac Raw Materials Inventory provides valuable tools for helping you run your business better, while providing recall security. VistaTrac will scan any supplier barcode labels, including GTIN barcodes as well as non-standard formats. If you receive items that don't have barcode labels, VistaTrac can print receiving labels to add items to your inventory. Scanning raw materials into production removes them from the Raw Materials Inventory and marks them as used, for traceability purposes. At packing, VistaTrac allows a user to manually enter a batch number, which can be used to tie the finished goods to the raw materials that were scanned-in.

## Raw Materials

VistaTrac raw materials modules link the materials you receive to the finished goods that you send to your customers, and tracks them every step in between. Designed to enhance traceability and eliminate manual production worksheets to save time, prevent mistakes, and improve efficiency. VistaTrac allows you to know what's going on in the plant at all times, with detailed reports to analyze your processes and provide detailed traceability.

## Integration

VistaTrac's Integration is what sets us apart from the competition. Don't throw away your investments and replace your existing accounting system! Integration links VistaTrac to your order-entry system for maximum value and minimum investment. Many traceability systems rely on their own accounting or order-entry system, but VistaTrac allows you to use a standard package like QuickBooks or SAGE. That means your employees don't have to learn a completely new system, making implementing VistaTrac much easier than other systems on the market. Use your accounting software for sales orders and invoices just like you do now, except without all the manual entry!

VistaTrac provides real-time data collection on the plant floor - for traceability, inventory control, and process management. Through intelligent integration, we help you leverage your investments in accounting/ERP or WMS software. Schoneman, Inc. was founded in 1987 by Steve Schoneman in West Chester, PA. Now located in Northeast Ohio, Schoneman, Inc. uses only in-house programmers and support staff.
